

Checkers Instructions

Instructions to create executable:

- Open the Eclipse development environment
- Navigate to file>import
- Select “existing projects into workspace” and click next
- Choose “select root directory” and click browse
- Navigate to the root directory of the downloaded project
- In the projects window make sure the “Checkers” project is selected
- Click finish, now the project should be imported into Eclipse
- Navigate to file>export
- Select the “Java” option, and within that select “runnable JAR file”
- In the Launch configuration drop down menu select “Checkers - Checkers”
- Under “Export destination” navigate to the desired export destination
- Make sure “Extract required libraries into generated JAR” is selected
- Click Finish

Instructions to run executable:

- Navigate to the export location selected when creating the executable
- Run the file named “Checkers” or “Checkers.jar”
